

The iFlow "wool03" in the package "testmcp" was tested by submitting a request to create two bathroom products:

- Bathroom Sink
- Bathroom Mirror

The creation request was successful, but the response only returned details for one product ("Product") and not a list of all products. Attempts to list product names via GET requests were unsuccessful due to endpoint restrictions.

**\*\*Summary:\*\***

- Two bathroom products were submitted for creation.
- The names sent: Bathroom Sink, Bathroom Mirror.
- Only one product's details were returned by the iFlow.
- Listing all product names from the endpoint was not possible due to technical limitations.

If you need a full list of products or confirmation for both, please provide details on the expected response format or check the target system for the created products.
